

Central Contractor Registration and the Standard Procurement System

28 January 1998

CCR Background

- n Developed to support Electronic Commerce Infrastructure and provide a 'single face' to industry
- n Current phased approach:
 - n Phase I - support for Debt Collection & Improvement Act
 - n Phase II - single database to support DoD procurements
 - n Phase III - enhanced database to support all federal procurements

CCR Phase I

- n Phase I operational 31 March 1998
- n 300,000 vendor database “seeded” with data from several existing databases (D&B, CCR, DFAS, etc.)
- n Vendors must be registered to receive a contract after 31 March 1998
 - n DoD procurement officers will query CCR to check vendors’ registration status via Interactive Voice Response and/or World Wide Web
 - n <http://ccr.edi.disa.mil>
 - n 1(800)841-4431 (616)961-5757 DSN 932-5757

Current CCR Data *

- n DUNS Number
 - n CAGE Code
 - n Legal Business Name/Doing Business As
 - n Address
 - n Division Name and Number
 - n Point of Contact
 - n Average Number of Employees
 - n Average Annual Revenue
 - n Corporate Status
 - n Business Class Check Boxes
 - n SIC Codes
 - n EDI Parameters for Financial Service Provider
 - n Correspondence Check Boxes
 - n Vendor bank routing data utilized by DFAS to support EFT requirement
 - n Optional:
 - n EDI parameters for Vendor
 - n Affiliates
 - n Quality Standards
- * list is not all-inclusive

Change process will enable CCR to continually meet users' requirements

SPS Challenge

- n SPS requires automated access to vendor data
- n Navy SPS currently establishing approximately 400 site-specific vendor data bases, e.g.,
 - n PWC Norfolk keyed in data for 25,000 vendors
 - n FISC San Diego procured AMS tool to migrate vendor data to new data base
- n Non-standard data compounds difficulty of future compilation into single data source
- n Numerous data bases drive up maintenance costs

CCR Benefits to SPS

- n Comprehensive, single data source will:
 - n Enlarge field of potential bidders thus increasing competition and available sources
 - n 300,000 vendor database “seeded” with data from several existing databases (D&B, CCR, DFAS, etc)
 - n Save costs of maintaining plethora of data repositories
 - n Eliminates need for SF 129 “Vendor Registration” and SF 3881 “EFT Registration”
 - n Enable vendors to register once, in one data base
 - n Increased responsiveness to priority procurements
- n CCR is ready for access, available and essentially “free” to SPS community

Other 'Paper Free' Benefits to SPS

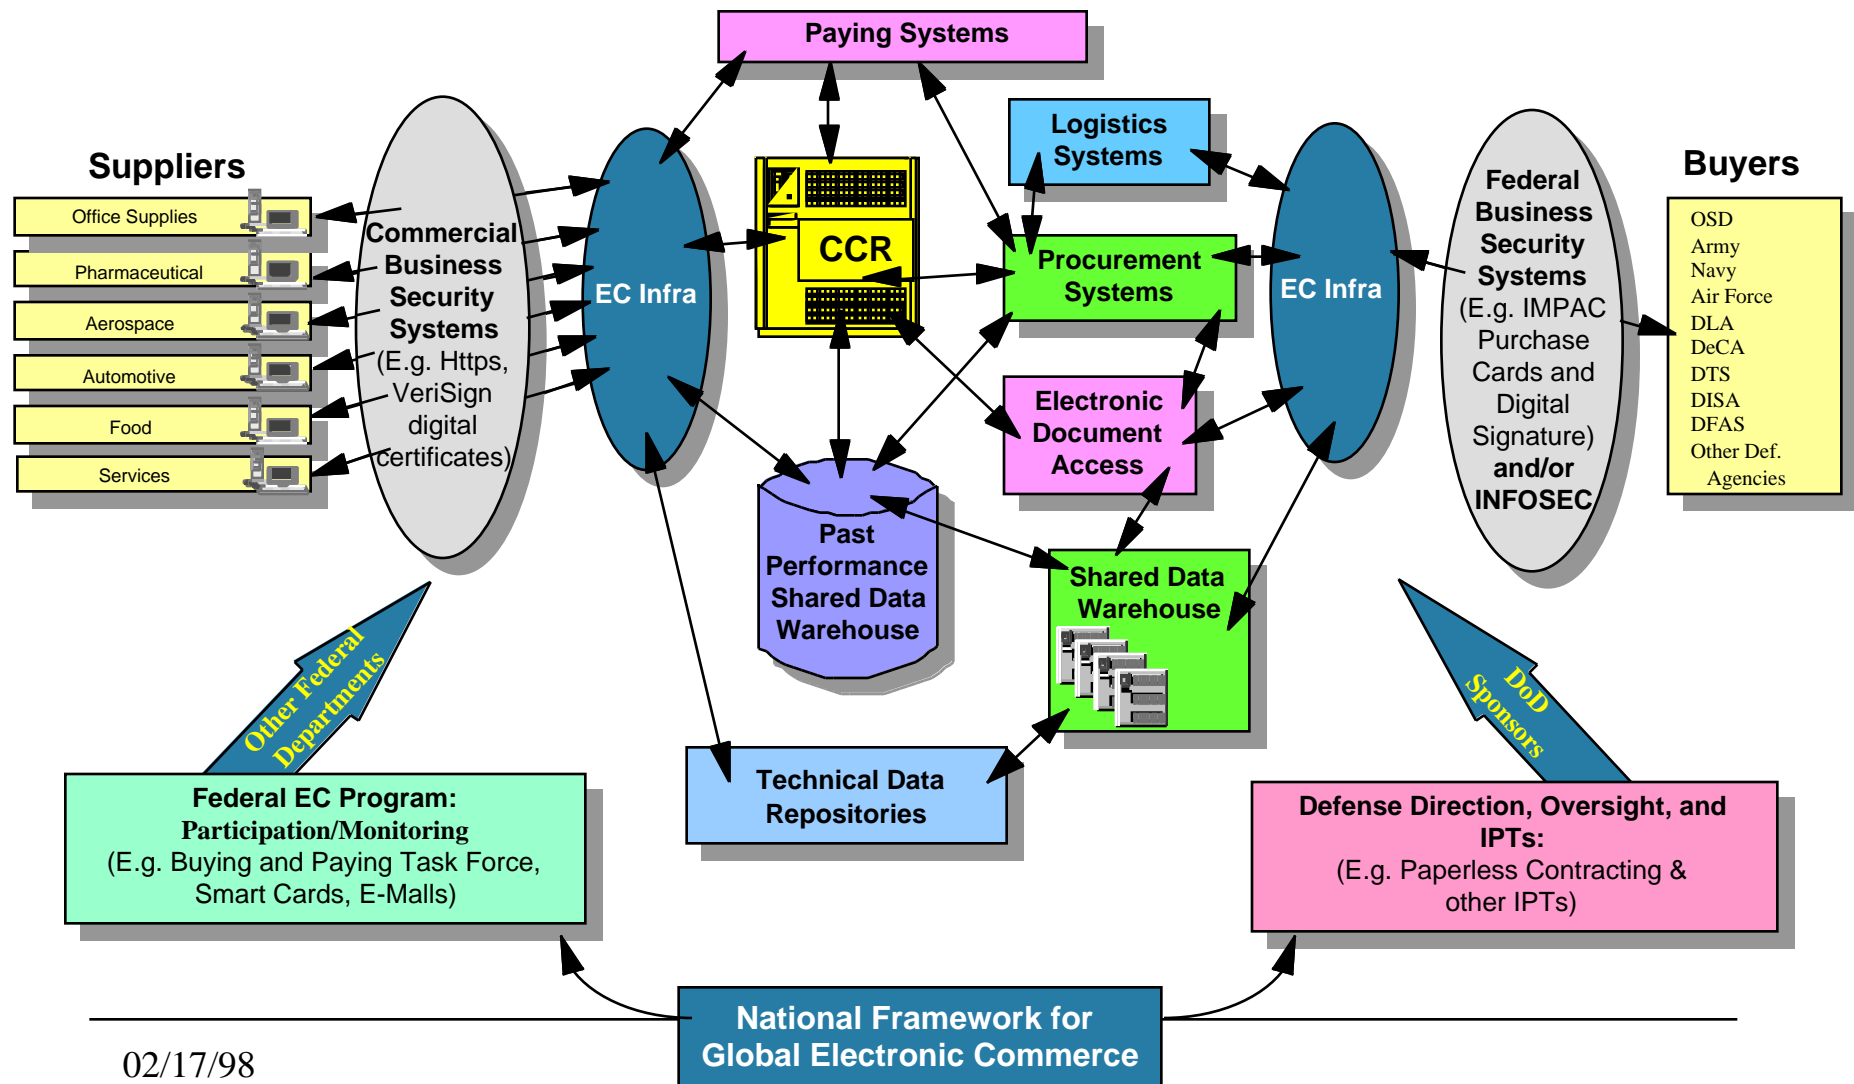

- n Change process allows modification for other essential contract information unique to DOD (e.g., classification status for receipt of export controlled drawings; status for receipt of proprietary drawings)
- n Could provide linkages to technical data repositories (e.g., TDPMIS, JEDMICS)
- n Ability to store information critical to service/agency-specific business needs
- n Can link to single past performance data base
- n Provides vendor 'Hub' for EDI

SPS/CCR Requirements Meeting

- n CCR representatives met with SPS Requirements Board on 23 January 1998
- n SPS Requirements Board committed to identify functional requirements to CCR Integrated Product Team by 13 February 1998
 - n Data requirements
 - n Capability changes and/or improvements
 - n Interface requirements
 - n Infrastructure needs
 - n Education/Information
 - n Schedule for area operational needs
 - n Timing of needed changes
- n SPS/CCR interface plan to be developed from SPS requirements
